

# JDS Civil Designs & Surveys

## Environmental Policy

Management at JDS Civil Designs & Surveys is committed to understanding and minimising the environmental impacts of our activities in the provision of civil engineering consulting services.

Management at JDS Civil Designs & Surveys is also committed to providing a safe working environment for our employees and contractors and believes that all employees and those associated with the company play a key role in achieving our environmental goals by providing the necessary resources and tools to our people and enable their full involvement.

To achieve these goals we will implement the following:

- Where ever possible encourage the use of Water Sensitive Urban Design in all civil design projects with the assistance of Local Government, Councils and Melbourne Water;
- Aim to achieve a level of environmental performance that goes beyond what is required by regulatory bodies on projects which we have control or influence, and in our own operations;
- Encourage our employees and contractors to identify and act upon opportunities to prevent pollution and to minimise the adverse environmental impacts of our operations and the projects that we undertake;
- Encourage the reduction of waste and the consumption of natural resources in our operations by purchasing environmentally friendly products where possible and recycling office waste wherever possible;
- Reduce energy consumption by using energy efficient products and encourage turning off equipment from the principal power supply where possible;
- Expect and encourage our contractors to meet the same standards we impose on ourselves.
